

## 2100X-A Automatic Patent Pending Automation

A machine that pays you dividends for life!  
Some of the unbelievable features:

### 2100X-A Rapid Thread Carriage

has patent pending technology that is far more precise and consistent than what is offered in the market today. This is very important as poor performance in the carriage can double your film usage and cost! Ask Why?

### 3 machines in 1

With the push of a button you can switch from automatic to semi-automatic to automatic top banding!

### At 30 loads/day the 2100X-A

Patent pending automation will pay for itself in only 3½ months, after that it's dividends!

### Makes your health & safety department very happy

The only time someone touches the machine is to change the film roll. They are out of harms way and no more bending over or jumping on and off the fork truck thousands of times.

### “Green”

Meticulously designed to be compact without compromising load sizes. This results in less shipping costs increased portability and takes up less warehouse space.

**Panasonic PLC controller  
with Panasonic touch  
screen!**

**Five electro/mechanical  
back-up safety devices!**

**5000 LB  
Capacity!**

**Affordable - in the Semi-
